

## Proposition de Stage de Master (M2) Master BMC

Université de Paris - UFR des Sciences du Vivant

**Conventions : Sorbonne Université, Université Sorbonne Paris Nord, Université Paris Saclay,  
Muséum National d'Histoire Naturelle, Institut Pasteur**

### Equipe d'Accueil :

Intitulé de l'Unité : UMR\_S 959, Immunology Immunopathology Immunotherapy Lab

Nom du Responsable de l'Unité : David Klatzmann

Nom du Responsable de l'Équipe : Guillaume Darrasse-Jèze

Adresse : Hôpital de la Pitié Salpêtrière, 83 Boulevard de l'Hôpital,

Batiment CERVI, 75651 PARIS Cedex 13 FRANCE

Responsable de l'encadrement : Guillaume Darrasse-Jèze

Tél : (+33) 1 42 17 65 18      E-mail: guillaume.darrasse-jeze@inserm.fr

### 9 Parcours de M2

(plusieurs parcours peuvent être choisis)

#### - Biologie moléculaire, cellulaire et fonctionnelle de l'hématopoïèse

Responsables: S. Giraudier, N. Dulphy, E. Lauret

#### - Biomolécules, biologie et pathologie moléculaires

Responsables: JM. Dupret, F. Rodrigues-Lima

#### - Biologie et développement cellulaires : contactez directement les responsables

Responsables: A. Guichet, A. Benmerah

#### - Inflammation et maladies inflammatoires

Responsables: R. Monteiro, L. Mouthon

#### - Biothérapeutiques: Conception et applications

Responsables: I. Garcia-Verdugo, JM. Sallenave

#### - Immunologie et Immunopathologies

Responsables: M. Viguier, E. Tartour, S. Siberil

#### - Microbiologie

Responsables: I. Martin-Verstraete, X. Nassif

#### - Virologie

Responsables: S. van der Werf, F. Rozenberg

#### - Microbiologie et génie biologique

Responsables: O. Dussurget

**Titre du sujet de recherche :**

**Nature and role of Antigen Presenting Cells in Maternal Fetal Tolerance**

**Résumé du projet**

The nature of antigen presenting cells (APCs) involved in the process of maternal fetal tolerance is poorly known, and their role is ambiguous as they may induce the priming of fetal- or Allo- specific T cells but also favor the recruitment of fetus-protecting regulatory T cells and NK cells.

The aim of this M2 internship project is to decipher the role of APC subsets in normal or pathological pregnancy mice models.

The student will identify and quantify the different APCs present at the maternal fetal interface during normal and pathological pregnancy in mice, and evaluate the impact of low level or high level of APCs in genetically-modified mice deficient for, or overexpressing specific dendritic cell or macrophage subsets. To achieve these goals, the student will perform in vivo experiments and use multi-parameters flow cytometry to study the composition, activation status, and cellular interaction of dendritic cells and macrophages subsets at the maternal fetal interface and in the conceptus draining lymph nodes. He/She will then evaluate the correlation between these APCs and the levels of Tregs and NK cells and the success of pregnancy.

Cells and Biomarker identified in these models will later be evaluated in patients with implantation failures and multiple miscarriages, with the hope to improve diagnosis and propose new therapies for these pathologies.
